angermanagement

 **MHS**

EQ-i 2.0 Model of Emotional Intelligence

SELF-PERCEPTION

Self-Regard is respecting oneself while understanding and accepting one's strengths and weaknesses. Self-Regard is often associated with feelings of inner strength and self-confidence.

Self-Actualization is the willingness to persistently try to improve oneself and engage in the pursuit of personally relevant and meaningful objectives that lead to a rich and enjoyable life.

Emotional Self-Awareness includes recognizing and understanding one's own emotions. This includes the ability to differentiate between subtleties in one's own emotions while understanding the cause of these emotions and the impact they have on one's own thoughts and actions and those of others.

STRESS MANAGEMENT

Flexibility is adapting emotions, thoughts and behaviors to unfamiliar, unpredictable, and dynamic circumstances or ideas.

Stress Tolerance involves coping with stressful or difficult situations and believing that one can manage or influence situations in a positive manner.

Optimism is an indicator of one's positive attitude and outlook on life. It involves remaining hopeful and resilient, despite occasional setbacks.

SELF-EXPRESSION

Emotional Expression is openly expressing one's feelings verbally and non-verbally.

Assertiveness involves communicating feelings, beliefs and thoughts openly, and defending personal rights and values in a socially acceptable, non-offensive, and non-destructive manner.

Independence is the ability to be self directed and free from emotional dependency on others. Decision-making, planning, and daily tasks are completed autonomously.

DECISION MAKING

Problem Solving is the ability to find solutions to problems in situations where emotions are involved. Problem solving includes the ability to understand how emotions impact decision making.

Reality Testing is the capacity to remain objective by seeing things as they really are. This capacity involves recognizing when emotions or personal bias can cause one to be less objective.

Impulse Control is the ability to resist or delay an impulse, drive or temptation to act and involves avoiding rash behaviors and decision making.

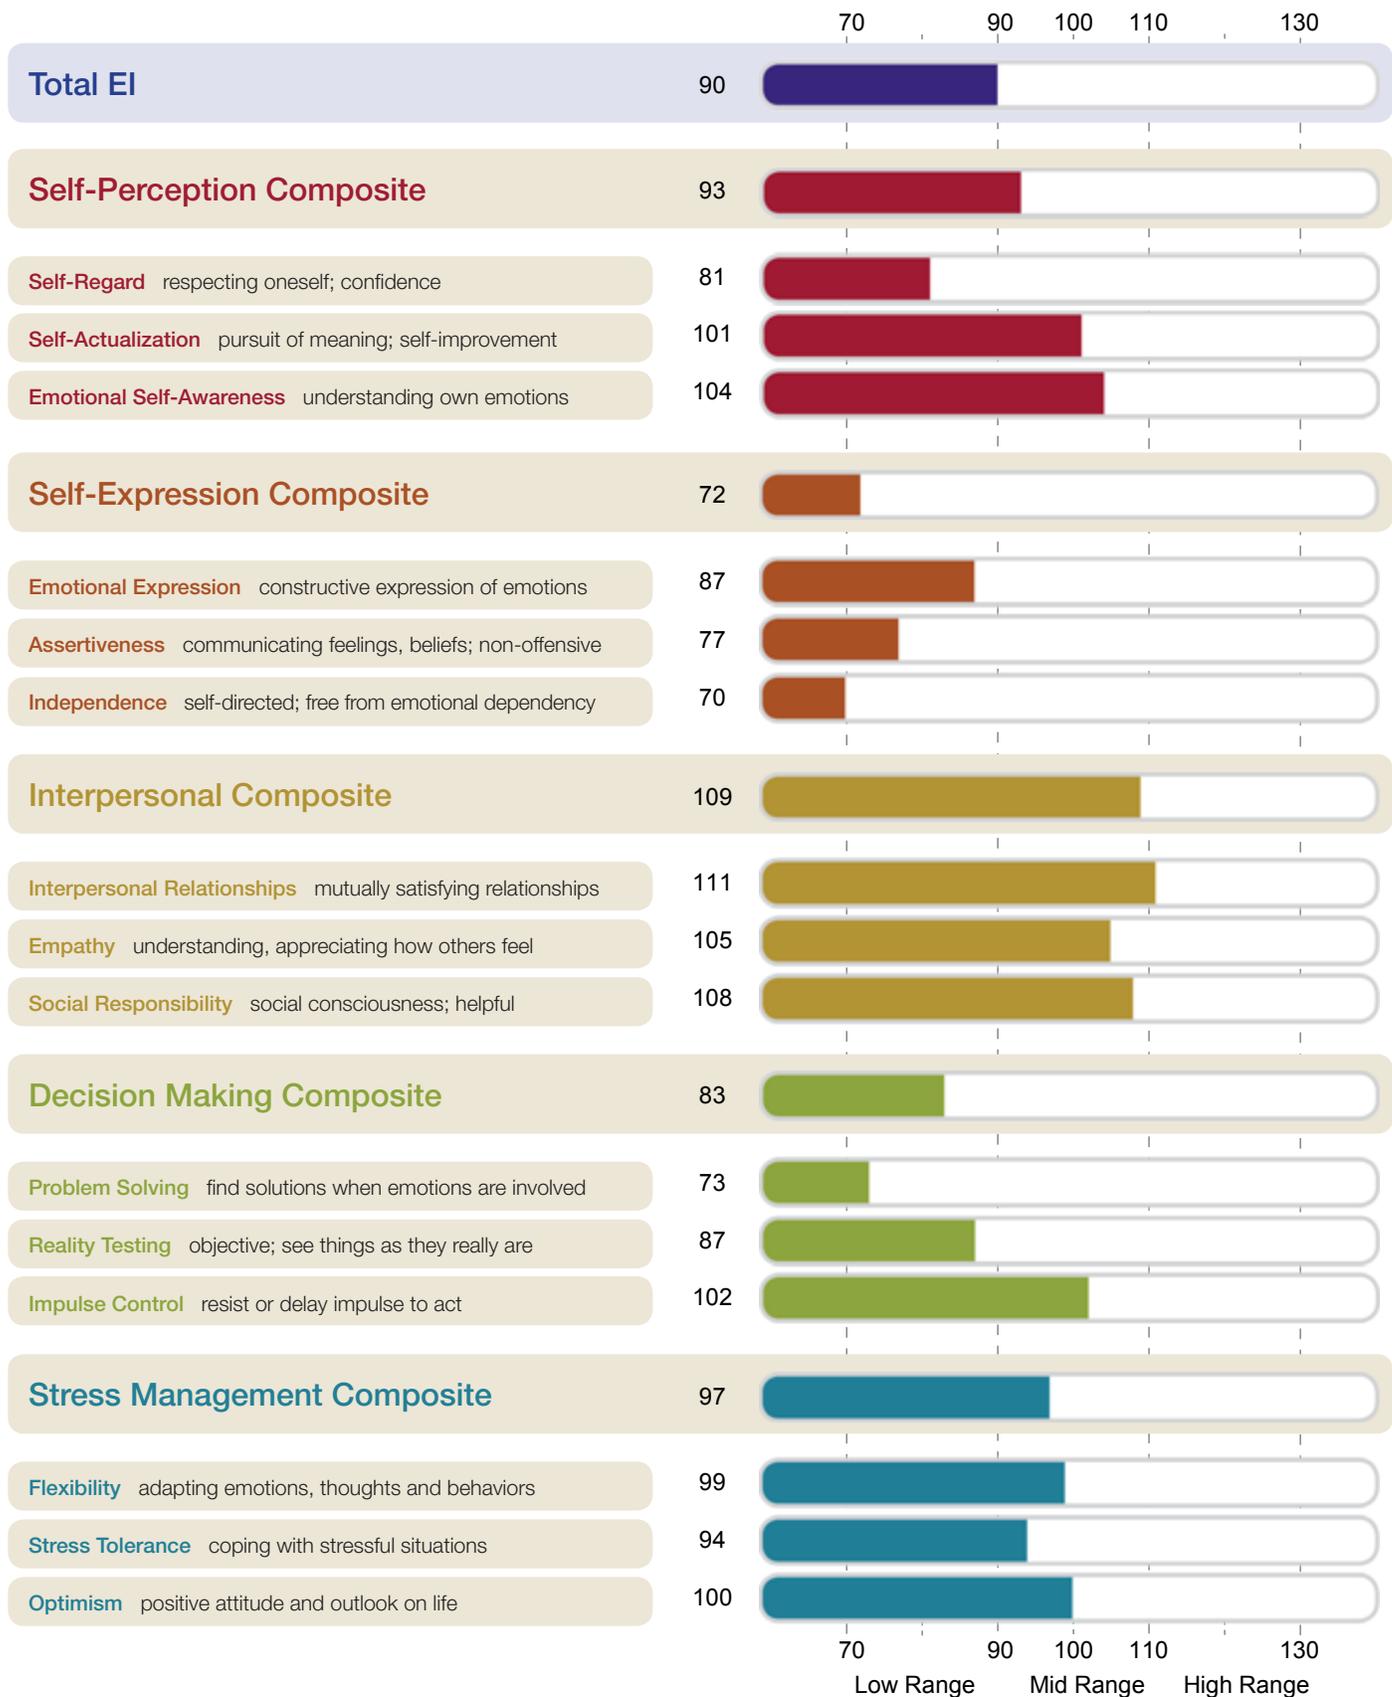

INTERPERSONAL

Interpersonal Relationships refers to the skill of developing and maintaining mutually satisfying relationships that are characterized by trust and compassion.

Empathy is recognizing, understanding, and appreciating how other people feel. Empathy involves being able to articulate your understanding of another's perspective and behaving in a way that respects others' feelings.

Social Responsibility is willingly contributing to society, to one's social groups, and generally to the welfare of others. Social Responsibility involves acting responsibly, having social consciousness, and showing concern for the greater community.

Overview of Your Results

Self-Regard

Self-Regard respecting oneself; confidence

81

70 90 100 110 130

Low Range Mid Range High Range

What Your Score Means

Individuals with self-regard respect themselves and accept both personal strengths and limitations while remaining satisfied and self-secure. Jane, your result suggests that self-regard may be an area where you would benefit from improvement. Your uncertainty in your own abilities may translate into decreased performance and resistance to taking on greater challenges at work. You may be:

- generally more conservative in your estimation of your capabilities.
- unable to recognize your strengths or forgive yourself for your weaknesses.
- low in self-confidence and feelings of self-adequacy.

Impact at Work

Emotional Implications. The emotional implications of low self-regard extend further than many people realize. Your result suggests that you may feel inferior, less talented or less capable than your colleagues. You may also have lower motivation to achieve your fullest potential, a less positive outlook on your strengths and weaknesses, or you may struggle to confidently express yourself when working with others.

Social and Behavioral Implications. Your internal struggle with who you are and who you hope to be is often perceived as a lack of confidence by your colleagues. You tend to avoid interactions where you are less confident or use email to avoid face-to-face conversations at work. When presenting yourself, you may use uncertain or wishy-washy language, a softer, shy posture, or avoid eye contact. You may be passed over for leadership opportunities because you often hide your skills and talents.

Strategies for Action

Self-Regard Inventory. Conduct a Self-Regard Inventory on your job performance.

- List your strengths and areas for improvement. For every strength listed, ensure you are fully using each one in your role. The more you practice using your strengths, the more you will realize your true potential and resulting confidence in these areas.
- For each improvement area, assign a strength that can be leveraged. For example, draw on your strong technical expertise to present your opinion confidently in meetings.

See it, Think it, Do it. Low self-regard can be visible to your peers, so in addition to developing self-regard on the inside, you also need to consider how you represent yourself to others. When you feel self-doubt creeping in:

- SEE what success would look like to you (e.g., I will close this sale with only a 5% discount).
- THINK about how you will achieve success; tell yourself (and others) that it is possible to reach it.
- DO execute on your plan for success and present yourself accordingly (e.g., maintain eye contact and hold a confident posture—even if you are on the phone, use a steady-paced voice, ask others to hold you accountable).

Balancing Your EI

This section compares Self-Regard with Self-Actualization, Problem Solving, and Reality Testing. The subscale that differs the most from Self-Regard is Self-Actualization. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

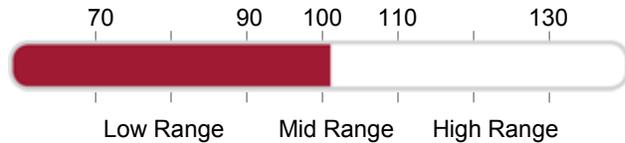

Self-Regard(81) ↔ Self-Actualization(101)

Your Self-Regard is lower than your Self-Actualization. These components can be aligned by evaluating self-worth in terms of concrete achievements. When appropriate, take time to recognize successes and how they reflect upon your abilities. Finally, ensure that you are considering your strengths and growth opportunities when determining which activities you should pursue.

Self-Actualization

Self-Actualization pursuit of meaning; self-improvement

101

What Your Score Means

Self-actualization can be summed up in three words: pursuit of meaning. While this sounds quite philosophical, in the business world it means finding purpose and enjoyment in your job and performing to your fullest potential. Jane, your result suggests that you are passionate about your work and life outside of work and take pride in setting and achieving challenging goals. Although you may believe that you can accomplish more, your result may mean that:

- you place value on training and keeping your expertise sharp.
- you appear to be working or acting with a plan in mind.
- for the most part you believe you are leading a rich and fulfilling life.
- at times you turn on “autopilot” mode, going through the motions of your job without truly striving to excel.

Impact at Work

Emotional Implications. Your success, happiness, and life satisfaction can probably be traced back to the fact that most of the time you do what you enjoy. Because you have found ways to apply your talents and strengths, you likely experience harmony knowing that your talents are being put to good use.

Social and Behavioral Implications. Your consistent drive to improve yourself, while pursuing personally relevant objectives, helps to create a fulfilling and varied life. This perpetual drive is often perceived by your colleagues as being organized, directive, deliberate, and purposeful. In addition, self-actualized individuals value the actual process of achieving their goals as much as or more than the final outcome. Therefore, you may find both short- and long-term planning, projecting, and scoping activities are likely natural processes for you.

Strategies for Action

The Small Things we Enjoy. Sometimes you just need to look at your job under a microscope to develop an even deeper passion for what you do.

- Write down some of the things you do in your job that are motivating for you. No matter how small, everything makes the list. Review this list once a week; Monday is usually a good day. Remind yourself that even the small things (like having a client compliment you on your presentation) can push you to do your very best.

Protect Your Time. Since you already know what you’re passionate about, you need to protect the time you have scheduled for these activities so they do not fall lower on your list of priorities.

- Block off time in your calendar, well in advance, for those activities you enjoy, especially if they are the vulnerable, non–work related type. Seeing an appointment in your calendar, even if it is for lunchtime yoga, will help you keep your time commitment.

Balancing Your EI

This section compares Self-Actualization with Self-Regard, Optimism, and Reality Testing. The subscale that differs the most from Self-Actualization is Self-Regard. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

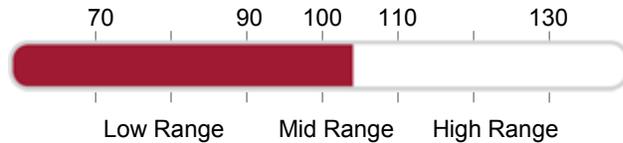

Self-Actualization(101)  Self-Regard(81)

Your Self-Actualization is higher than your Self-Regard. To balance these components, set realistic goals that are challenging and aligned with what you are trying to achieve in life. If you set goals that are unrelated to what is important to you, accomplishing them will not necessarily improve your self-worth. Set goals that are challenging, relevant, and give meaning to your life.

Emotional Self-Awareness

Emotional Self-Awareness understanding own emotions

104

What Your Score Means

If you have a solid understanding of what causes your emotions, it is much easier to regulate your behavior and control the impact your emotions have on those you work with. Jane, your result indicates that you are in touch with your emotions and that you manage them in a way that is healthy for you and your relationships at work. It is likely that you:

- have a solid read of your inner self—you can describe and manage the emotions you are experiencing.
- are aware of how emotions impact team morale, collaborative relationships, and individual performance.
- still have a few emotions that make you uneasy or are difficult to fully understand.

Impact at Work

Emotional Implications. One of the implications of recognizing your emotions and their triggers is that for you, experiencing an emotion is the result of a cause-and-effect relationship. You know when and why an emotion will be triggered and you know how to use that emotion to your benefit. You are usually in tune with the physiological sensations of emotion, but there may be some emotions that continue to slip by unrecognized.

Social and Behavioral Implications. Your level of Emotional Self-Awareness indicates that more often than not, you feel comfortable expressing your understanding of your thoughts and ideas to your colleagues and, moreover, you know how your emotions can increase individual and team morale. Your colleagues likely understand your stance and value your openness when it comes to how you are feeling. There may still be some circumstances at work that cause you to be unsure of your emotions. You could benefit from a bit more investigation into what triggered your feelings in these cases, and what subsequent action needs to be taken.

Strategies for Action

Cause and Effect. Your strength in identifying a cause-and-effect relationship for your own emotions can be leveraged to predict others' emotional reactions.

- The next time you are in a meeting ask others, "How do you feel about this direction?" or "What is your gut telling you about this decision?"
- Identify the causes of your colleagues' emotions and how their emotions impact their buy-in to a decision. This will help not only to show that you care about others' feelings (empathy), but to give you the information you need to predict how colleagues will react in the future.

Leveraging Emotions. Although you understand emotions quite well, you can always work on refining your ability to adopt the right emotion at the right time. People with strong emotional self-awareness are able to bring on emotions in themselves that will help them with the task at hand.

- Experiment with different techniques and mediums to make you feel a wide range of emotions (e.g., somber, happy, angry, creative, or peaceful). Putting yourself in a slightly somber mood can help you focus on analytical tasks, while being happy will help you with brainstorming or creative tasks.

Balancing Your EI

This section compares Emotional Self-Awareness with Reality Testing, Emotional Expression, and Stress Tolerance. The subscale that differs the most from Emotional Self-Awareness is Reality Testing. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

Emotional Self-Awareness(104) [↔ Reality Testing\(87\)](#)

Your Emotional Self-Awareness is higher than your Reality Testing. Do you have a tendency to focus more on your own feelings and less on what is going on around you? Keeping a balance between Emotional Self-Awareness and Reality Testing means giving equal consideration to your feelings and to those of others, as well as to the situation. The balance between these elements can be critical to optimal functioning.

Emotional Expression

Emotional Expression constructive expression of emotions

87

70 90 100 110 130

Low Range Mid Range High Range

What Your Score Means

Individuals who effectively express emotions use words and physical expressions to convey their feelings in a way that is not hurtful to others. Jane, your result indicates you have difficulty bringing emotions to the surface and sharing your true feelings with coworkers. You may appear emotionally detached from your colleagues, probably showing as little variation in your demeanor as possible. Consider the following characteristics of your result:

- certain emotions, if not most, are uncomfortable for you to express either through words, facial expressions, or body language.
- you use a limited emotional vocabulary to describe your feelings (e.g., happy and sad versus elated and somber).
- you assume people know how you feel so you don't display it through your words or actions.

Impact at Work

Emotional Implications. Think of Emotional Expression as the action part of the emotional experience. You tend to bottle emotions inside and not share them with others. This can create the illusion that you are either emotionless or that you do not grasp the significance of the situation.

Social and Behavioral Implications. Expressing one's feelings verbally and nonverbally is key to forming effective relationships. Your less expressive style may mean that in new environments you could struggle to engage others in a meaningful way. People can easily misperceive you as being withdrawn and as a result it may be hard for you to inspire others or gain the support you need. While you may feel comfortable remaining in a predictable, pokerfaced state, it is actually stressful for others when they need to share information with you. If you do not reflect your emotions, you may miss crucial information because others feel uncomfortable being open and honest with you.

Strategies for Action

Getting Rid of the Group Hug. At work, sharing your emotions shouldn't be a single organized event like the infamous group hug. Think about emotions as drivers of performance, like any other resource you draw upon to get your job done.

- Start small—try expressing what you feel in an email. Take time to find words that really describe how you feel. Praise a team member on his work, express your gratitude for someone's help, or voice your concern over deadlines.
- Once this becomes comfortable for you, start expressing yourself where appropriate in small conversations. Draw on the same emotional vocabulary you used in your emails.

Get it Out in Writing. If you find yourself dwelling on a particular feeling but not expressing it, begin to write an email to a friend. You will not send this email, so don't worry about who would receive it.

- Just start writing—this in itself can be a healing process. Describe the details of what happened, what *exactly* you are feeling and *why*.
- Although it is in written form, you have just completed the process of emotional expression. Take one small section of your email and appropriately talk it over with those involved. Take the email with you to refer to your notes and emotional language.

Balancing Your EI

This section compares Emotional Expression with Interpersonal Relationships, Assertiveness, and Empathy. The subscale that differs the most from Emotional Expression is Interpersonal Relationships. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

Emotional Expression(87) ↔ **Interpersonal Relationships(111)**

Your Emotional Expression is lower than your Interpersonal Relationships result. Keep in mind that strong interpersonal relationships are built on trust and respect; openly sharing your thoughts and feelings can go a long way to building both.

Assertiveness

Assertiveness communicating feelings, beliefs; non-offensive

77

70 90 100 110 130

Low Range Mid Range High Range

What Your Score Means

Picture a line between the words *passive* and *aggressive*. At the middle point of this line lies assertiveness, a place where you work with others by finding the right words at the right time to express your feelings and thoughts. Jane, you have the tendency to be more toward the passive side of this line, keeping opinions and thoughts to yourself rather than sharing them openly. Some of the following characteristics may apply to you:

- you are seen as supportive (of everything) and a team player, but at the expense of standing up for your beliefs.
- you play the role of “observer” in meetings or discussions.
- you have a lot to contribute, but feel defeated when no one hears your good ideas.
- you work harder than most because you struggle to clearly articulate to others what you need.

Impact at Work

Emotional Implications. Your tendency to keep thoughts inside may lead you to feel exhausted, frustrated, or even angry that you are on your own dealing with your unvoiced opinions. You may ruminate over bad decisions made, the “crazy” plan that someone created, or that coworker who took credit for your work. It’s as if all this occurred without your approval or your input, and yet you are left wanting to say so much.

Social and Behavioral Implications. Your level of assertiveness suggests that you have a tendency to act passively and have difficulty communicating feelings, beliefs, and thoughts openly. Your lack of assertiveness may prevent you from motivating others to achieve individual and team goals, effectively dealing with conflict, and obtaining adequate resources for effective job performance. You could also be seen as lacking initiative, particularly if you are low in independence. Your great ideas may stay hidden from your team and as a result you will not be as enthusiastic or committed to others’ ideas/directions (because you have something better in mind).

Strategies for Action

Overcoming Fear. A common reason for overly passive behavior is the fear of losing something as result of speaking up.

- Identify the last three times you were passive (meetings are great places to start). Then, brainstorm all the possible positive and negative results that could have occurred had you been more assertive.
- Most of our fear comes from an exaggeration of bad consequences. Think of situations where the good consequences outweighed the bad. Identify when similar situations will be occurring in future. These will be relatively safe opportunities for you to practice being more assertive.

Have a Goal in Mind. Try setting a small goal before you go into an assertive situation. When you are clear upfront on what you want to achieve, it is easier to assert yourself.

- Leverage the skills that you would normally use to get the job done (e.g., motivation, drive, technical skills, goal setting) to set a small goal for the conversation. Tie this smaller goal to a larger performance objective so you know something bigger is at stake. For example, “I will tell my manager today that customer service errors are angering my top customers. She won’t be happy, but if I don’t speak up we may lose these key accounts.”

Balancing Your EI

This section compares Assertiveness with Interpersonal Relationships, Emotional Self-Awareness, and Empathy. The subscale that differs the most from Assertiveness is Interpersonal Relationships. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

Assertiveness(77) ↔ **Interpersonal Relationships(111)**

Your Assertiveness is lower than your Interpersonal Relationships result. Placing greater emphasis on interpersonal relationships than on being assertive may permit you to support those you work with. Make sure you give equal emphasis to standing up for what you believe in, and speaking your mind when it is important to do so.

Independence

Independence self-directed; free from emotional dependency

70

70 90 100 110 130

Low Range Mid Range High Range

What Your Score Means

Jane, being independent means that you are capable of feeling, thinking, and working on your own. Your results show that you are not regularly showcasing your independence; instead, you often look to others for advice, reassurance, and direction. In your work environment, this can be particularly obvious when you need to make decisions. Although there is nothing wrong with consultation, regularly passing on the role of primary decision maker could be seen as emotional dependency. Consider the following interpretation of your results:

- you like guidance and direction from others on how to do your job.
- you prefer to defer decision making to someone else.
- you see yourself as a supportive follower, you go “with the grain”.

Impact at Work

Emotional Implications. Think of independence as the stage for showcasing your other EI abilities. If you are unable to think or act freely, you are less likely to demonstrate to your colleagues that you have other strengths in EI. You may have many great qualities, but others are unlikely to notice them.

Social and Behavioral Implications. Your score on Independence suggests that you are susceptible to the influence of your colleagues and superiors. Although you have a marked preference for working with others and making decisions in collaboration with coworkers, your reliance on these people suggests that you might be resistant or uncomfortable if required to work autonomously. In conversations or meetings, you may find yourself adopting the same emotions as others in the room or easily conforming to others’ decisions. While this can give the impression of being a great team player, it is at the expense of you putting forth your own independently generated ideas.

Strategies for Action

Stop the Self-Talk. Self-talk, that voice inside your head, can both motivate you and discourage you from being independent. If your self-talk is filled with fear of making mistakes or thoughts of self-doubt, you will be unlikely to take independent action. The next time you find yourself making excuses for why you shouldn’t act/decide on your own, write down arguments against each of your self-talk excuses. For example: “What if I make the wrong decision?”—“Well, I have consulted subject matter experts and completed my own research, so I am well informed. And if it is the wrong decision, then the worst that will happen is ____”.

Holding Yourself Accountable. When you need to make a decision, build in personal accountability by stating to others that you will be the primary decision maker and that you are gathering input to be well informed prior to making the decision.

- By simply stating up front that you are the final decision maker, you will be less likely to pass the buck to someone else for the final decision.
- You can still gather information and feedback prior to making the decision; just be aware that no one is going to give you the answer—you need to do that on your own.

Balancing Your EI

This section compares Independence with Problem Solving, Emotional Self-Awareness, and Interpersonal Relationships. The subscale that differs the most from Independence is Interpersonal Relationships. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

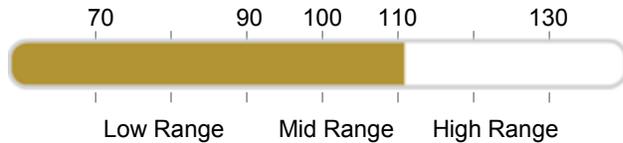

Independence(70) ↔ **Interpersonal Relationships(111)**

Your Independence is lower than your Interpersonal Relationships result. To balance these components, recognize the importance of being a team player, without becoming overly reliant on the direction or support of others. Be collaborative, but retain the courage of your convictions.

Interpersonal Relationships

Interpersonal Relationships mutually satisfying relationships

111

What Your Score Means

Jane, this subscale is about developing and maintaining mutually satisfying relationships and your result shows an above-average capability to build relationships with compassion, trust, and mutual give-and-take. Your colleagues support you in getting your job done, and in turn others seek you out because of your approachable demeanor. Some characteristics of your result are:

- you have built up, or are currently building up, a useful network of colleagues and professionals.
- your relationships are authentic; you know people on a personal level.
- you feel at ease with people and look forward to engaging in social interactions.

Impact at Work

Emotional Implications. For you, relationships are an essential part of life and you are likely heavily invested in making your relationships work. One implication of this emotional investment is that you may hide emotions or shy away from making decisions that could potentially cause conflict. Particularly if you scored high in Empathy and low in Assertiveness, you should determine if you or your relationships are suffering as a result of withholding your true thoughts and emotions.

Social and Behavioral Implications. Your result suggests that you take an active role in establishing and maintaining your professional relationships at work. You are probably seen as a “connector”, aware of who does what, who knows what, and who needs to know what. Maintaining confidences, team harmony and open communication are likely top priority for you in your job. As you continue to build relationships, it is important to know the boundaries of these interactions. Failure to recognize when you begin to occupy more and more of your colleagues’ time may result in less time allocated to projects, at which point your social interactions may prove costly to job performance.

Strategies for Action

Recognition Goes a Long Way. Remember to celebrate events that are important to your coworkers, but also express recognition on a regular basis. Instances may include birthdays, promotions, or recognition for a job well done.

- Do you know what kind of recognition your coworkers prefer? Not everyone likes “Happy Birthday” sung at their desk or a reward given in front of their peers.
- Leverage empathy skills to determine what type of recognition motivates and is appreciated by each of your coworkers.

Sharing the Truth. A healthy work relationship needs to be based on open communication, without fearing that your opinion will cause irreparable damage.

- The next time you find yourself tempted to hold back your true thoughts for the sake of group happiness, pause.
- Write down what you really think or feel. Look at this statement and list all the potential positive and negative outcomes that could occur as a result of sharing your opinion.
- If the positives outweigh the negatives, rephrase what you want to say beginning with an agreement statement and ending with your true opinion.
- Bring this newly phrased statement to your discussion and be prepared to share it, starting with agreement and ending with your honest thoughts.

Balancing Your EI

This section compares Interpersonal Relationships with Self-Actualization, Problem Solving, and Independence. The subscale that differs the most from Interpersonal Relationships is Independence. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

Interpersonal Relationships(111) ➔ **Independence(70)**

Your Interpersonal Relationships result is higher than your Independence result. These components work in unison by distinguishing the times when collaboration and group work is needed from times that require independent functioning. As a general rule, when tasks can be completed independently, it may be best to do so, leaving colleagues free to work on other tasks that they may be required to do.

Empathy

Empathy understanding, appreciating how others feel

105

70 90 100 110 130

Low Range Mid Range High Range

What Your Score Means

Empathy, the ability to recognize, understand, and appreciate the way others feel, is a crucial EI skill at the heart of all effective work relationships. Jane, your result indicates that you are generally an empathic person who is able to grasp what another is feeling, even if it is much different from what you feel. Your empathic nature makes you an approachable and open team member with whom coworkers feel safe sharing thoughts and ideas. With a result such as yours you may find:

- you are “tuned in” to how others are feeling.
- you care about the thoughts and feelings of others as much as you do your own.
- under times of stress or moments of defensiveness, you are likely to adopt a less empathic approach, possibly arguing your position without considering the needs of others.

Impact at Work

Emotional Implications. Your result in Empathy provides a solid foundation for all other interpersonal skill areas. You draw on your ability to respect others so that your interactions with others appear sincere. Still, certain emotions may cause your normally empathetic demeanor to crack. Anger, for example, may get the best of you, causing you to become critical instead of your typical caring and respectful self.

Social and Behavioral Implications. Generally speaking, your ability to perceive and understand other people’s emotions suggests that caring for others is built into the process of achieving your day-to-day tasks. For you, empathy is an active process that is inherent in the way you make decisions, resolve conflict, manage change, and work as a contributing team member. Often this results in others reciprocating their thoughts and emotions. Your ability to demonstrate empathy where appropriate will go a long way toward fostering your interpersonal relationships.

Strategies for Action

Be Prepared. Prior to your next meeting, prepare by:

- Listing all attendees and what needs and expectations each brings to the meeting
- Predicting how they will act during the meeting. What issues do you need to be sensitive towards?
- Generating a number of questions to further understand your colleagues’ needs during the meeting. You may not be able to resolve conflicting needs, but these engaging questions will help show your interest and compassion for others’ situations and needs.

Connecting on a Personal Level. If you know colleagues on a personal level you will better understand what impacts their emotions and be in a better position to see situations from their perspective.

- With some of your lesser known colleagues, take the time to connect with them on topics outside of their field of work (e.g., children, sports, current events, traveling).
- With the next situation that calls for empathy on your part, draw upon this background information to show your sensitivity to their needs (e.g., “You must really be feeling stressed with two sick kids at home and I know your wife is away at that conference. How can I help?”).

Balancing Your EI

This section compares Empathy with Emotional Self-Awareness, Reality Testing, and Emotional Expression. The subscale that differs the most from Empathy is Reality Testing. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

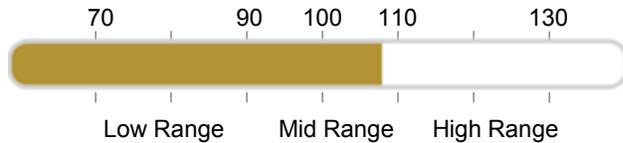

Empathy(105) ↔ **Reality Testing(87)**

Your Empathy is higher than your Reality Testing. When these components are optimally balanced, you are able to account for both the “people factor” as well as the appropriate business factors, involving an objective analysis of the situation (strengths, weaknesses, opportunities, and threats). By considering both angles, including the people dynamics, the best decisions are usually made.

Social Responsibility

Social Responsibility social consciousness; helpful

108

What Your Score Means

Social responsibility is that moral compass directing your behavior toward promoting the greater good and contributing to society and one's social groups. Jane, your result suggests that you are generally altruistic in your efforts and act as a contributing member of the groups to which you belong (e.g., team, company, volunteer groups, community). However, there is always room for refinement as there are times when you do not recognize the needs of the larger group. Based on your result, you:

- are socially conscious and generally concerned with others' well-being.
- identify with, and see yourself as part of your team, your organization, and your community.
- feel a sense of fulfillment from helping others.

Impact at Work

Emotional Implications. Your level of social responsibility suggests you balance focusing on yourself with a focus on others. This means that you can put your own frustrations and resulting emotions into perspective as you have gained an appreciation for the difficulties others are facing. However, there is still room to grow your emotional experience by helping others in ways you haven't tried before.

Social and Behavioral Implications. It is likely that you uphold the moral and ethical compass within your organization and regularly place your team's goals ahead of your own personal agenda. You act in a responsible manner, taking care to ensure that any negative consequences of your actions are minimized. Although you can still be even more socially responsible, overall you appear to be a cooperative and contributing member of your workplace and community.

Strategies for Action

Your Active Roles. Make a list of all the active roles you assume. Try to come up with roles that are beyond your traditional family and professional titles (e.g., political volunteer, soccer coach, religious devotee, environmental advocate, blood donor).

- Look for areas where you have gaps in your active roles. For example, are you more "socially responsible" at work than you are in your community, or vice versa?
- Create for yourself a new role with a group of people or with a cause that you have not previously engaged in.

Taking the Initiative. Identify two or three charities, nonprofit organizations, or causes to which you feel a connection.

- While brainstorming, record several activities that you can engage in to help at least one of these organizations. Write down what outcomes you expect to see from engaging in each activity. Ensure these outcomes increase your responsibility to the organizations or people and aren't just about making yourself feel good.
- Create a plan and a time frame and if possible, share these details with someone who can hold you accountable to follow through on them.

Balancing Your EI

This section compares Social Responsibility with Self-Actualization, Interpersonal Relationships, and Empathy. Achieving balance between these subscales can enhance emotional functioning.

Social Responsibility(108)

Your Social Responsibility is well balanced with these three related subscales. To maintain this balance with these subscales, watch for significant growth in one subscale over others and consider ways that you can develop the subscales in tandem. Discuss with your coach whether comparing Social Responsibility with other subscales may lead to further EI development and enhanced emotional and social functioning.

Problem Solving

Problem Solving find solutions when emotions are involved

73

70 90 100 110 130

Low Range Mid Range High Range

What Your Score Means

Problem Solving is not about the quality of your solutions, but rather how effectively you use your emotions in the process of solving a problem. Jane, this is an area of emotional intelligence that you currently underuse, sometimes falling victim to your emotions during times when decisions need to be made. You may find yourself overwhelmed with the responsibility of making a decision, thus delaying the process of arriving at a timely conclusion. Your result indicates:

- you may prefer others to make decisions for you.
- you may struggle to keep a clear focus on the problem at hand.
- much of your time and energy is spent worrying about decisions rather than trying to solve them.
- you may feel as if you have little control over the outcome of the process.

Impact at Work

Emotional Implications. You are likely derailed by your emotions when it comes to decision making. Rather than leveraging the impact an emotion can have on your ability to solve a problem, you fall victim to your own emotions, such as worry, anxiety, and fear. You may end up feeling paralyzed, exerting effort into worrying about a problem rather than generating the most effective emotion to help you solve it.

Social and Behavioral Implications. To others, you may appear indecisive, incapable, or unsure of yourself when faced with a problem to solve. Rather than taking action to resolve a problem as quickly as possible, your emotions may cloud your thinking, causing you to worry, feel overwhelmed, or avoid solving the problem all together. Although you may eventually reach sound solutions, it is difficult for people to see you in a leadership capacity where decisiveness and execution are paramount.

Strategies for Action

Define A Problem. By keeping your focus entirely on the definition of the problem, you can eliminate the tendency to worry about everything extraneous to the issue (e.g., the problem's history).

- Write down a precise and objective definition for a problem you need to solve (i.e., just like it would appear in a dictionary without including your subjective thoughts/language).
- Keep this definition in a place where you can be reminded of it daily. Without any emotional terms, this problem is now simply a task like any other on your to-do list and should be tackled in small steps.

Watch Your Limit! Our brains typically handle seven chunks of information, whether we are memorizing or deciding between many options; seven seems to be the maximum amount of information we can effectively manage.

- The next time you are stuck in solving a problem, ensure you are dealing with no more than seven pieces of information (or deciding among fewer than seven choices). Too much information paralyzes you, while too little leaves you uninformed.
- Also, if your decision is stressful, your mental and emotional resources will be even fewer, so you may want to limit yourself to three options.

Balancing Your EI

This section compares Problem Solving with Flexibility, Reality Testing, and Emotional Self-Awareness. The subscale that differs the most from Problem Solving is Emotional Self-Awareness. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

Problem Solving(73)  **Emotional Self-Awareness(104)**

Your Problem Solving is lower than your Emotional Self-Awareness. To balance these aspects of EI, emotions should be considered in the decision making process, but not over-analyzed. Emotional information should be integrated into the decision making process but should not block action. Working through emotions verbally with others as you are arriving at a decision can be helpful.

Reality Testing

Reality Testing objective; see things as they really are

87

70 90 100 110 130

Low Range Mid Range High Range

What Your Score Means

Call it “being grounded” or “tuned into the situation,” Reality Testing means seeing things for what they really are. In business, this includes accurately sizing up the environment, resources, and future trends in order to set realistic plans/goals. Jane, your result suggests that you often lose your objectivity in favor of seeing things how you wish them to be. Decisions you make and interactions with others could all be based on unrealistic information that has been colored by your biases. Your result suggests:

- you tend to view a situation from only one perspective.
- you set goals and objectives that are seen as unrealistic to those you work with.
- overly positive (extreme happiness) and negative emotions (high anxiety) may color the way you view a situation or make it difficult to focus.

Impact at Work

Emotional Implications. Your ability to accurately assess another’s emotional state or a situation may be skewed by your underdeveloped Reality Testing skills. You may fall victim to gathering information that fits your preexisting assumptions, finding evidence to support what you want to see versus what actually exists.

Social and Behavioral Implications. When your emotions or personal biases prevent you from remaining objective, you may be compromising your credibility in the eyes of your colleagues. In business today, you must walk the fine line between setting lofty stretch goals and realistic, achievable goals that everyone can commit to. You gravitate toward the unrealistic side of this line and as a result pursue goals that others would consider far-fetched and misaligned with the operating environment. In extreme cases, your perception of reality may cause impairment in work functioning as you tend to see situations as you wish them to be rather than as they truly are.

Strategies for Action

Stop the Self-Talk. Reducing the irrational self-talk that clouds your judgment will help strengthen Reality Testing.

- When you are required to make a decision, size up a situation, or give advice, go through a mental SWOT analysis as soon as you find yourself relying on preexisting assumptions (e.g., “I’ve had bad experiences with consultants, so I am sure this new consultant will be even worse.”).
- Find evidence for strengths, weaknesses, threats, and opportunities. Then ask a trusted colleague to go through the same SWOT process to make sure that what you identified is confirmed by an outside source.

Practical Actions. Breaking a problem or decision down into small, practical steps can help you stay focused on the reality of the situation and not what you wish would happen.

- Practical actions are specific steps that need to be taken, resources that need to be gathered, or buy-in you need to secure in order to make a decision.
- Listing practical actions helps you to stay grounded under pressure by keeping your focus on specific tasks required to reach a bias-free decision.

Balancing Your EI

This section compares Reality Testing with Emotional Self-Awareness, Self-Regard, and Problem Solving. The subscale that differs the most from Reality Testing is Emotional Self-Awareness. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

Reality Testing(87) ⚡ Emotional Self-Awareness(104)

Your Reality Testing is lower than your Emotional Self-Awareness. Be aware of your own emotions and use emotional information to inform your actions and decisions. This emotional input must be kept in balance with an awareness of what is happening with others and with the goals or tasks at hand. By doing so, decisions will properly consider both people factors as well as logistics.

Impulse Control

Impulse Control resist or delay impulse to act

102

70 90 100 110 130

Low Range Mid Range High Range

What Your Score Means

Impulse control involves understanding the appropriate times and ways to act on emotions and impulses, and the importance of thinking before acting. Jane, your result shows someone who is generally able to resist or delay impulses to act. Your stable nature helps to put people at ease; coworkers will feel that they can predict your behavior and will open communication channels with you. Your result may indicate a tendency to:

- be deliberate and apt to survey a situation before responding.
- control your emotions and impulses to act.
- be considerate of sharing “airspace”, ensuring everyone has a chance to speak.
- be somewhat impulsive under times of stress or pressure.

Impact at Work

Emotional Implications. Your emotions are usually expected visitors: you experience them, learn from them, and then take action based on this emotional knowledge. This deliberate experience of emotions prevents you from acting erratically when an emotion presents itself.

Social and Behavioral Implications. Your ability to remain focused, delay temptation, and generally avoid making rash decisions has tremendous interpersonal and professional implications. Leadership requires flexibility, but it is an astute focus and deliberate planning that results in corporate buy-in. You are likely respected for your ability to stay the course and think before you act. There is still room to improve your impulsivity, particularly in times of stress or extreme temptation. In such instances you may find it hard to resist impulses to act which may lead to rash decisions or behavior you later regret.

Strategies for Action

Impulse Inventory. There is still room for you to grow your understanding of what types of situations cause you to be impulsive.

- Conduct an inventory of what makes you impatient or impulsive. Think of the last couple of weeks of work—what reactions did you have that you wish you could take back?
- Write a list of what triggered these regrettable moments (e.g., stress, being caught off guard, team conflict). Being aware of specific triggers will help you plan to avoid them or practice your emotional response before they happen.

Learning from Regret. Rewriting a situation where you acted impulsively can help you see the positive effects of deliberate, contemplative action.

- For a situation or decision where you acted rashly, try to identify the emotion you were experiencing at the time. Was it frustration, anger, hopelessness?
- If you could rewrite the situation, what would you have done differently? How could you have exercised more control?
- Use this example of how you wished you had behaved as a goal. Try to demonstrate this behavior in the next two weeks, and make note of any positive effects your more controlled behavior had on yourself and those around you.

Balancing Your EI

This section compares Impulse Control with Flexibility, Stress Tolerance, and Assertiveness. The subscale that differs the most from Impulse Control is Assertiveness. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

Impulse Control(102)  Assertiveness(77)

Your Impulse Control is higher than your Assertiveness. These components work best together when assertiveness is tempered by good impulse control, resulting in communication that is both forthright and respectful. This means taking the time to consider the impact of your actions, and then proceeding with confidence in an appropriately assertive manner that reflects the most significant aspects of a situation.

Flexibility

Flexibility adapting emotions, thoughts and behaviors

99

70 90 100 110 130

Low Range Mid Range High Range

What Your Score Means

Flexibility requires that you be able to modify your thoughts, emotions, and behaviors in response to change. Jane, you appear to be accepting of change and shifting priorities in your workplace. You embrace learning new things and remain open to others' opinions and new ways of thinking and doing things. While you likely value progress and innovation, there are some situations where you stick to your tried and true methods, preferring predictability over spontaneity. Some indicators of your result are:

- a willingness to respond to changes in the workplace (e.g., structural changes, new technology, evolving market needs).
- an inclination to enjoy change and find it refreshing.
- hesitation to change at times, most likely when you are under stress or feeling anxious.

Impact at Work

Emotional Implications. Your Flexibility suggests that although you frequently adapt your thoughts, emotions, and actions, there are still times when your emotions prevent you from accepting change. For many businesspeople, being a specialist in one's profession is a lifetime pursuit, but keep in mind that it also creates an inherent rigidity. Your emotional attachment to "your ways" can prevent you from adapting to changes in the business.

Social and Behavioral Implications. Your result suggests you can tolerate change and may even thrive when change is required. Your tolerance for change is likely welcomed by your organization and is a desirable skill in today's fast-paced and progressive culture. You may be seen as a champion of change, promoting the benefits of adjustment, and garnering buy-in from your peers. While there are some moments where you prefer sticking with the status quo, this is something that could be easily improved upon in your case.

Strategies for Action

The Plastic Brain. Research suggests that our brains have a lifelong plasticity, that even in adulthood we can learn complex things. Why then has it been so long since we attempted to learn something completely new?

- The key is to move outside of your area of expertise and begin to learn something entirely new (e.g., learn a new language, take fencing or cooking lessons, learn to grow an organic garden) and accept the arduous practice and mistakes that come with taking on a new skill. (Remember learning how to ride a bike?)
- Once you start attaching positive emotions to the small successes you experience in this new area, you will find yourself becoming even more accepting of change in other areas of your life.

Ask for Help. When you find yourself being resistant to change, take some time out to solicit the opinions of trusted coworkers and embrace their views on a particular problem and how they would approach it. Particularly under stress, you may find yourself going down the same road you always travel, but if you take the time try out even one new strategy or technique, you will broaden your skill base and enhance your ability to cope with change.

Balancing Your EI

This section compares Flexibility with Problem Solving, Independence, and Impulse Control. The subscale that differs the most from Flexibility is Independence. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

Flexibility(99)  Independence(70)

Your Flexibility is higher than your Independence. These components are balanced when you remain open to new ideas and approaches, but are able to remain convicted to your ideas when you believe something is important, even if it differs from the consensus or viewpoint of others. You want to be receptive to the ideas of others, but avoid being passively compliant, or simply "going along with the crowd."

Stress Tolerance

Stress Tolerance coping with stressful situations

94

70 90 100 110 130

Low Range Mid Range High Range

What Your Score Means

Stress Tolerance is the ability to cope with and respond effectively to stress and mounting pressure. Jane, your result indicates that you are armed to withstand stress with a repertoire of effective coping strategies. You are able to manage your emotions, remain composed, and maintain your performance, even when times get rough. Although you may not handle all stressful conditions well, you have the underlying belief that you can control your reaction to stress. Some characteristics of your result are:

- you can maintain a level of work performance even under mounting pressure or competition.
- you actively cope with stress without letting your emotions take over.
- weaknesses in other areas of EI may be more apparent during times of stress.

Impact at Work

Emotional Implications. Although you can keep control of your emotions during times of stress, there is the possibility that you do not leverage and use your emotions. Rather than subduing your emotions, remember to use them. The emotion of happiness can help you come up with creative solutions to your stressful situation.

Social and Behavioral Implications. Your ability to tolerate stress and exert some influence over the situation is likely to appear calming and even inspiring to your colleagues. Your ability to openly cope with your challenges and even bring others along with you is a sign of tenacious leadership, a quality that is imperative given the full schedules we all work with. Although mounting pressure can cause you to lose your composure, for the most part others can predict your calm and focused demeanor and as a result are likely to openly share information with you.

Strategies for Action

Building your Coping Strategies Bank. There are several effective behavioral strategies that can you help you better cope with daily stressors and improve your overall stress tolerance. Some of these strategies are so discreet you can use them in the office to address stress as soon as it starts:

- deep breathing, belly breathing, visualization exercises
- progressive muscle relaxation, acupressure
- yoga, tai chi, meditation

Worry-Free Zone. Declare a worry-free zone somewhere in your workplace.

- Move away from your desk and spend five minutes in a different location (e.g., cafeteria, outside) where the only rule is: No thinking about the thing that is causing you stress.
- Allow your mind to cool down and to become clear again. Only then are you in the best position to leverage your emotions in order to respond appropriately to the stress.

Balancing Your EI

This section compares Stress Tolerance with Problem Solving, Flexibility, and Interpersonal Relationships. The subscale that differs the most from Stress Tolerance is Problem Solving. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

Stress Tolerance(94) [↔](#) Problem Solving(73)

Your Stress Tolerance is higher than your Problem Solving. Balancing these areas often means taking action to solve problems even in situations where you feel you are able to cope adequately. Although the ability to manage stress is a key asset, the best outcome is to eliminate the underlying cause of the stress, and reduce sources of unnecessary anxiety and pressure.

Optimism

Optimism positive attitude and outlook on life

100

70 90 100 110 130

Low Range Mid Range High Range

What Your Score Means

Optimism, the ability to remain positive despite setbacks, often differentiates between “star performers” and others in the workplace. It permeates almost every application of EI, from helping you persevere to enabling you to view change as a good thing. Jane, your result shows a person who is normally optimistic, preferring to see the world in a positive light. A result in the average range also indicates that you are not so overly optimistic that you are blind or naïve to the realities of life. Some characteristics of your result are:

- you tend to see the world with a “glass half-full” approach.
- you are hopeful about the future.
- you are energized by setbacks and obstacles, fuelled to overcome challenges in life.

Impact at Work

Emotional Implications. Optimistic people experience a range of emotions. You are not so optimistic that you ignore fear, nor are you so pessimistic that you ignore happiness. To your team, this grounded optimism is likely contagious; others will see your hopeful vision of the future, and with realistic plans they will see that this vision is attainable.

Social and Behavioral Implications. Hopefulness and resilience are attributes of effective leaders. You are likely able to see opportunities and possibilities that others may overlook or simply reject for being too difficult, too time-consuming, or outside of the organization’s current comfort level. Your goals (and if applicable, the goals you set for others) are likely to reflect your optimistic approach to work; you see the possibilities and set stretch targets that help you strive for the best. There is still room to increase your level of optimism, as certain instances at work likely cause you to be more negative than you wish to be.

Strategies for Action

Pessimistic Moments. If there are times when you feel less optimistic, take note of when these occur.

- Identify the trigger for your pessimism. Is it when timelines are tight? Are you in a leadership role and skeptical of others’ capabilities?
- Debate the validity of this pessimism. Look to the past to confirm whether similar successful or unsuccessful situations have occurred.
- If your pessimism is warranted, perhaps contingency plans for this risk should be considered.

Reevaluate. When you are faced with a challenge and your normally optimistic demeanor wavers, you may need to reevaluate your goals in order to visualize a successful outcome.

- Adjust your tasks and goals into more manageable and attainable segments. For larger, more daunting projects, try to break them into five to seven smaller steps.
- This does not mean that you should oversimplify or trivialize what is needed, but it does help to become more solution-focused at smaller intervals than to be burdened by a single overwhelming goal.
- For each smaller step, describe what you visualize success to be. Keep focused on these smaller outcomes to help bring your optimism back in line.

Balancing Your EI

This section compares Optimism with Self-Regard, Interpersonal Relationships, and Reality Testing. The subscale that differs the most from Optimism is Self-Regard. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

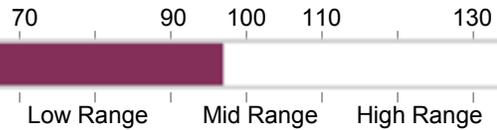

Optimism(100) ➔ Self-Regard(81)

Your Optimism is higher than your Self-Regard. When these two components are working effectively together, self-confidence helps to drive and promote positive expectations about the future. It is good to be optimistic but it is also important to know the skills and expertise that will be required of you as you plan and prepare for the future.

Well-Being Indicator

Happiness satisfied with life; content

97

How to Use this Page

Happiness includes feelings of satisfaction, contentment and the ability to enjoy the many aspects of one's life. It is different than the other EI abilities in that Happiness both contributes to, and is a product of, emotional intelligence. As such, your result in Happiness is like an indicator of your emotional health and well-being.

Your Happiness result is shown below, linked to your results on the four subscales most often associated with Happiness.

Because Happiness is so interconnected with all EI abilities, you may find further development opportunities if you explore how the remaining subscales contribute to your level of Happiness, and vice versa.

Happiness

Jane, your result in Happiness suggests that more often than not you feel satisfied with your life, and generally enjoy the company of others and the work you do. You may:

- have fun at both work and play when participating in activities you enjoy.
- be seen by coworkers as likeable and pleasant to be around.
- have to occasionally manage your discontentment with certain aspects of your life.

Of the subscales most typically tied to Happiness, you scored lower in Self-Regard. Directing development efforts here could strengthen your level of Happiness.

Self-Regard (81)

Happiness is a by-product of believing in oneself and living according to your own values. Your low Self-Regard may lead you to question your values, performance and decisions, ultimately lowering your happiness.

- Reflect on past accomplishments by identifying skills that enabled you to be successful.
- What do you admire most about yourself? Why? What do you like the least?

Optimism (100)

In the face of setback and disappointment, the ability to recover and claim a happy state is contingent on one's level of optimism. Your results suggest you are optimistic and hopeful most of the time, but perhaps you could use this outlook more frequently so that your happiness becomes even more personal, permanent and justifiable.

- When are you the least optimistic? How could your outlook be improved in these situations?
- When faced with a new challenge, how do you typically feel? List your emotions and think about why you feel this way.

Interpersonal Relationships (111)

Your Interpersonal Relationships result indicates that you have well-developed relationships that likely help shield you from the negative effects of life's daily demands. If maintained, these relationships can enhance and sustain pervasive feelings of happiness.

- Are there times when you struggle with your relationships? If so, what causes the struggle and how do you remedy conflict and miscommunication?
- Do you have a mentor? Do you act as a mentor to someone else?

Self-Actualization (101)

Happiness comes from a willingness to learn and grow on a journey aligned with your values. Your result suggests a good level of self-actualization, but further development in this area will help to promote feelings of achievement and overall happiness.

- Identify what you value most in life. Are you spending enough time on the activities most important to you?
- What legacy will you leave behind?

Action Plan

The steps you take towards achieving your EI goals will determine whether or not success is realized. Use this step-by-step activity plan to help guide you closer to your goals. Remember to use the **SMART** goal setting criteria for each goal.

SPECIFIC
MEASURABLE
ACTION-ORIENTED
REALISTIC
TIMELY

Write down up to three EI skills or behaviors that you would like to further develop (e.g., “reflective listening” to build empathy, or “recognizing how my body reacts to stress” to raise emotional self-awareness). The SMART goals that you outline in the template should help to strengthen these EI skills and behaviors.

- 1.
- 2.
- 3.

Write down up to three overall qualities that you would like to have (e.g., integrity, providing clear leadership, team player, clear communicator). In some way the goals you outline in this action plan should help you achieve the overall qualities you identified.

- 1.
- 2.
- 3.

Transfer your SMART goals into the action plan template below.

SMART Goal	Time Frame	Benefits	Measure of Success	Support and Resources Needed	Potential Barriers
Listen to others	In team meetings Starting from today	Other people will listen to me I will get to hear everyone's views	Feedback from the team to say that I am listening to them more Take actions that other people have suggested	From the team to give me honest feedback	Time – often do not have time to listen to views but just need to give instructions. If this is the case need to tell people at the beginning of the meeting

I commit to this action plan _____
